

# QtQuick Training Course

## Module Six

# Objectives

## 1 Design Workflow

Product success factors

UX driven development modules

Not all designers are the same

Designs deliverables

## 2 QtQuick and Design

How QtQuick and design get together

Interaction design

Easy prototyping and testing

# Topics

- 1 Design Workflow
- 2 QtQuick and Design
- 3 Questions
- 4 Lab

# Product success factors

According to Nokia these are the factors necessary for a product to achieve success. Some of them are UX responsibility. Which ones?

Technology

Appearance

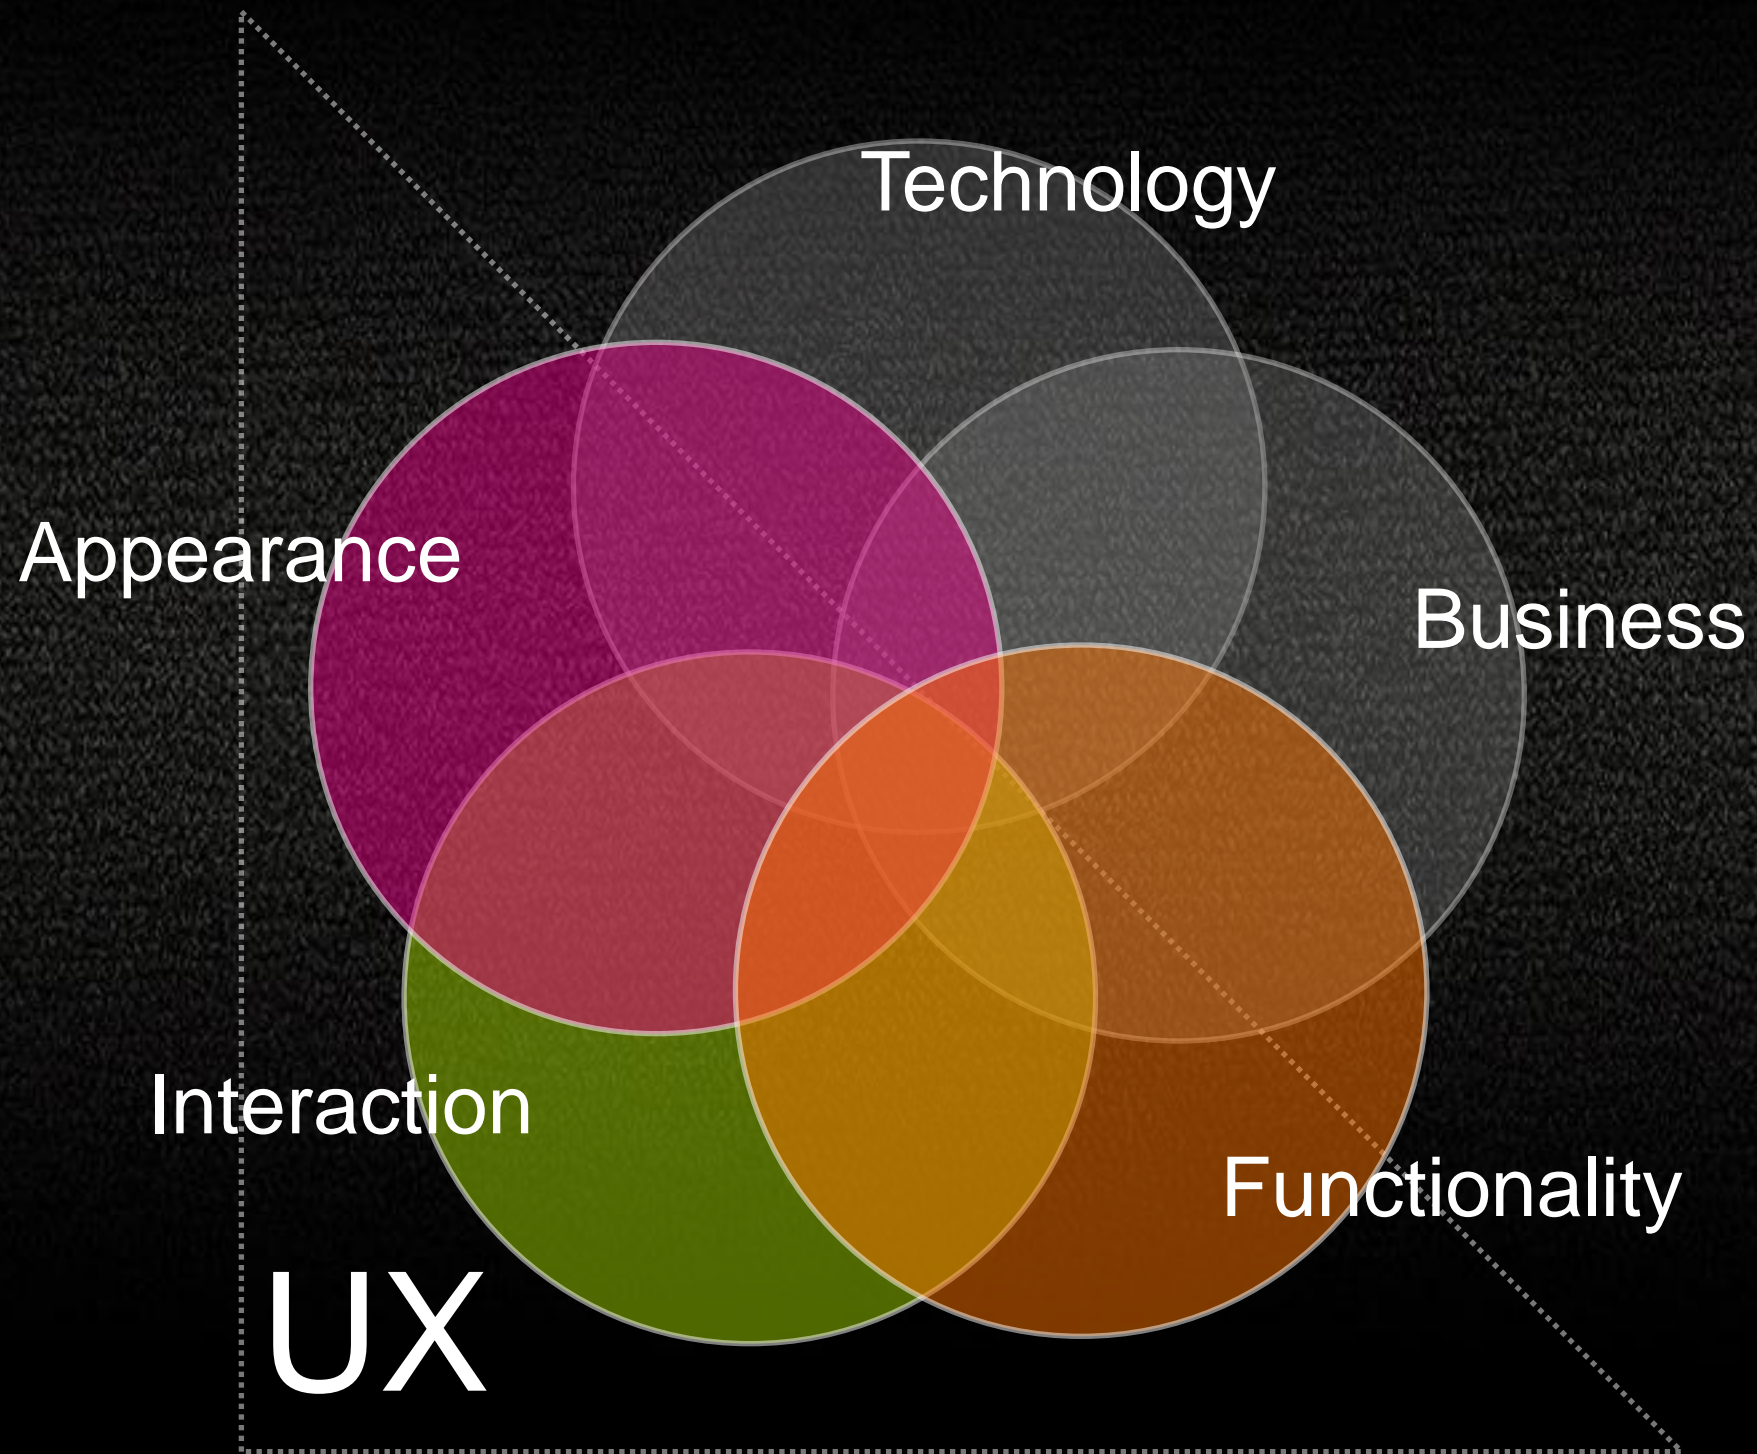

Interaction

Business

Functionality

# UX product focus

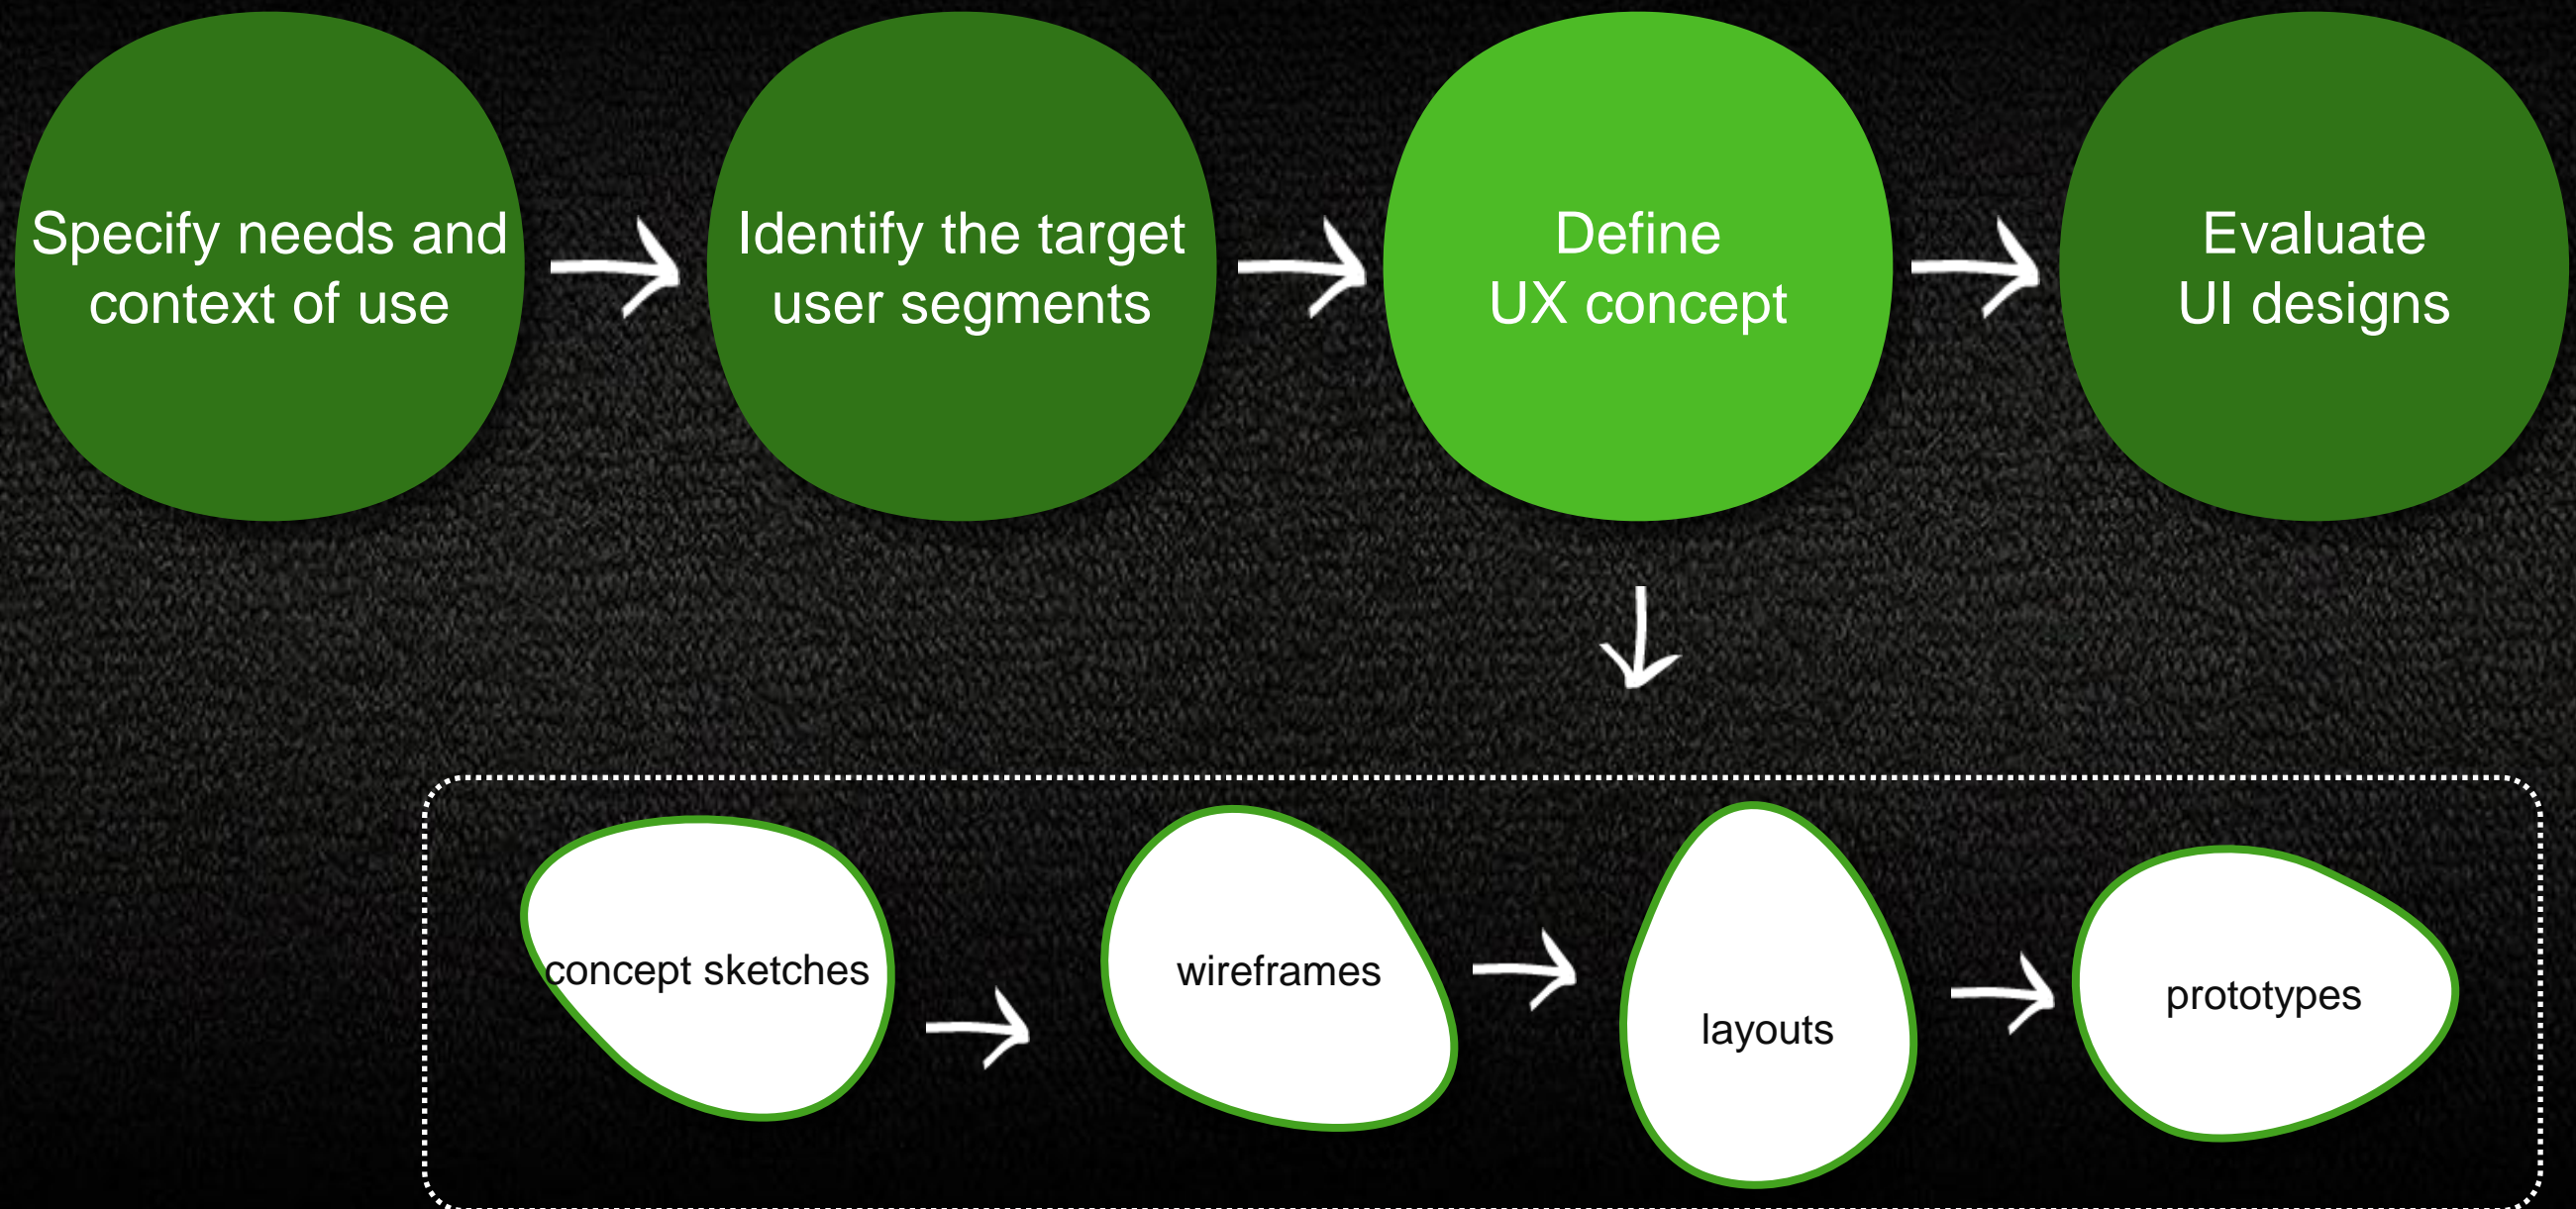

# UX Driven development modules

- 1 Why and what people will use it for and under what conditions they will use it
- 2 Identify the target user segments
- 3 UI production: sketches, wireframe, graphic, prototyping
- 4 Evaluate UI designs (preferably done with real users)

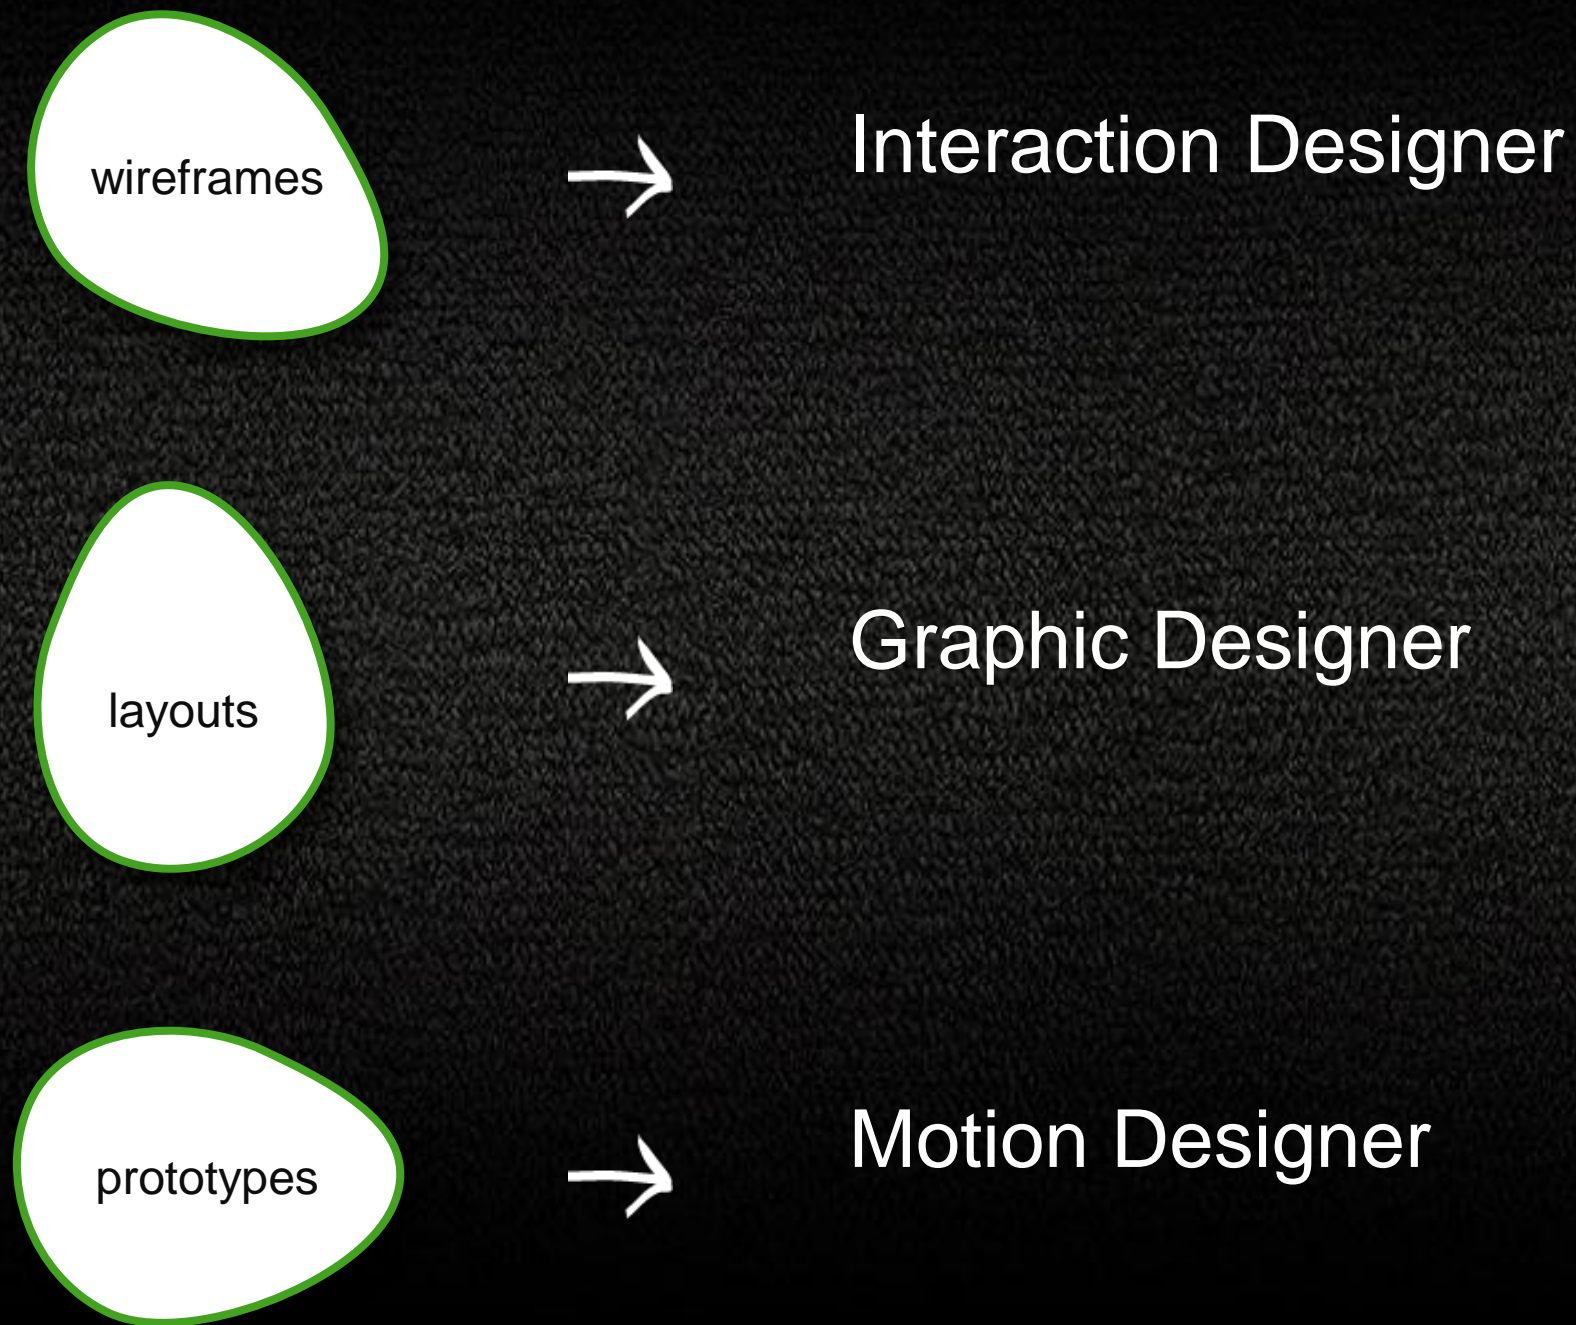

# Workflow process

# Not all designers are the same

# Designers 101

Flows and logics are a designer's task

If it moves, it has to be designed

Not all designers have an artistic background

Designers can be testers

# Interaction

Color blind designer

Interaction is about:

- User's perception of what is on the UI
- User's inputs
- User's perception of what the system is doing
- User's perception of the system outputs

UI structure, data, functions, events, components

# Interaction Deliverable

## Nokia Smart Home

### 4. ENERGYMETER

#### 2. Device Groups screen

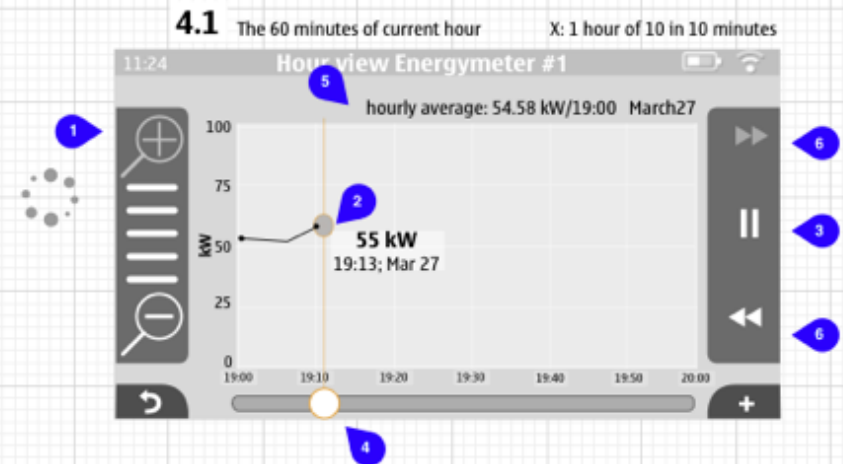

Tap  
Energymeter

#### 4. Energymeter screen

Energymeter on NetDK 01	
Energymeter #1	25 kW
Energymeter #2	0 kW
Energymeter #3	2 kW

Tap  
label item

#### Notes

##### 1. Zoom control

The graphics starts on the maximum zoom, showing the "Hour View" and the user can zoom out until the "Year View".

##### 2. Last measurement

The graphic shows the last measurement and it continues measuring until the user Tap in PAUSE button (3). So, the data is updated automatically and in real time.

##### 4. Measurement

Through the navigation bar the user can check every point of the graphic. So, if the graphic is the Hour View it is possible to know every minute of that hour. In the same way, it is possible to know every month and every week measured of a Year View graphic.

##### 5. Average

On the top of each graphic it is possible to know the average measured. For instance, hourly average, daily average, weekly average, monthly average, yearly average.

##### 6. Browsing

Through the FAST FORWARD and FAST REWIND keys it is possible to change the page, getting a new whole graphic of Day, Week, Month or Year, respectively.

# Graphic

Visual part of the product

It doesn't hurt to look cool

Layouts, colors, typography, icons and decorations

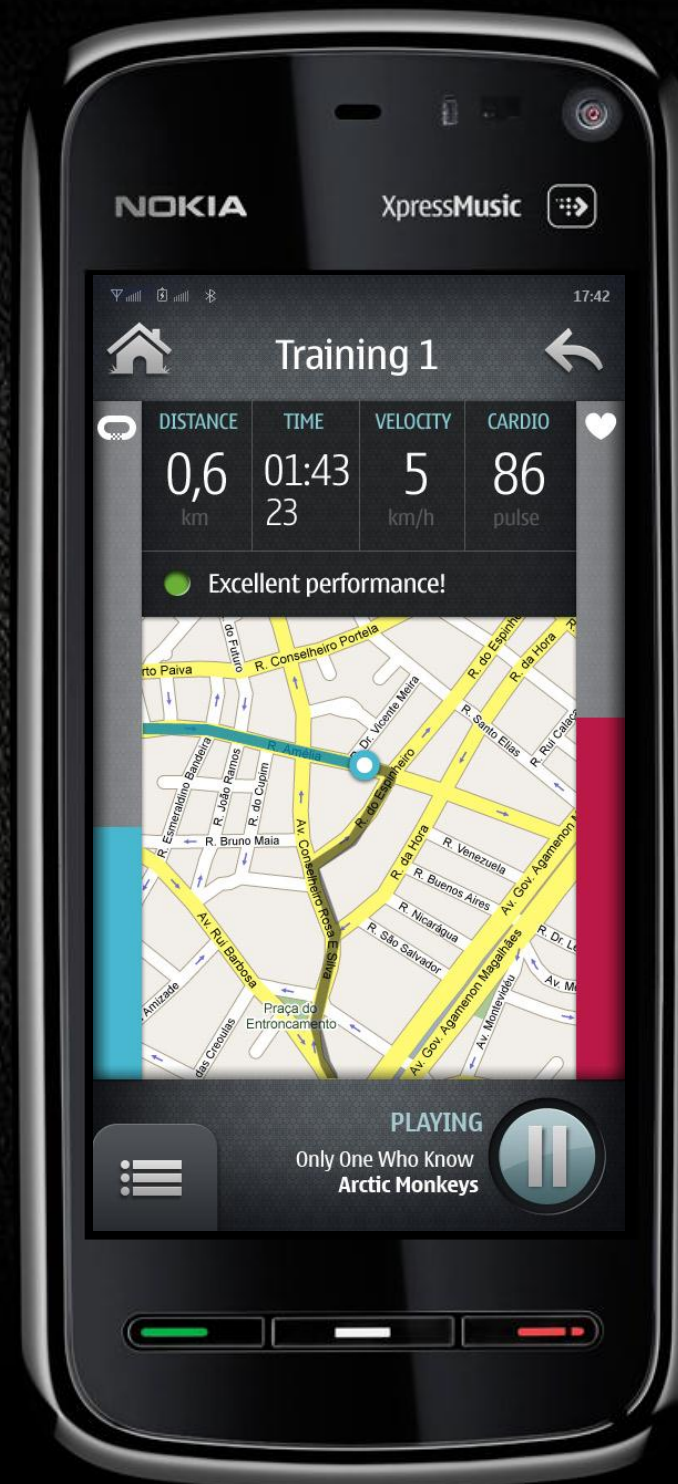

# Graphic Deliverable

## Design Workflow

# Graphic Deliverable

# Motion

Brings things to life in the UI

Animations/Transitions

Mock-ups

Prototypes

# Motion Deliverable

Traditionally done using Flash

See video: [addon/module-006/videos/canola\\_podcast.mov](#)

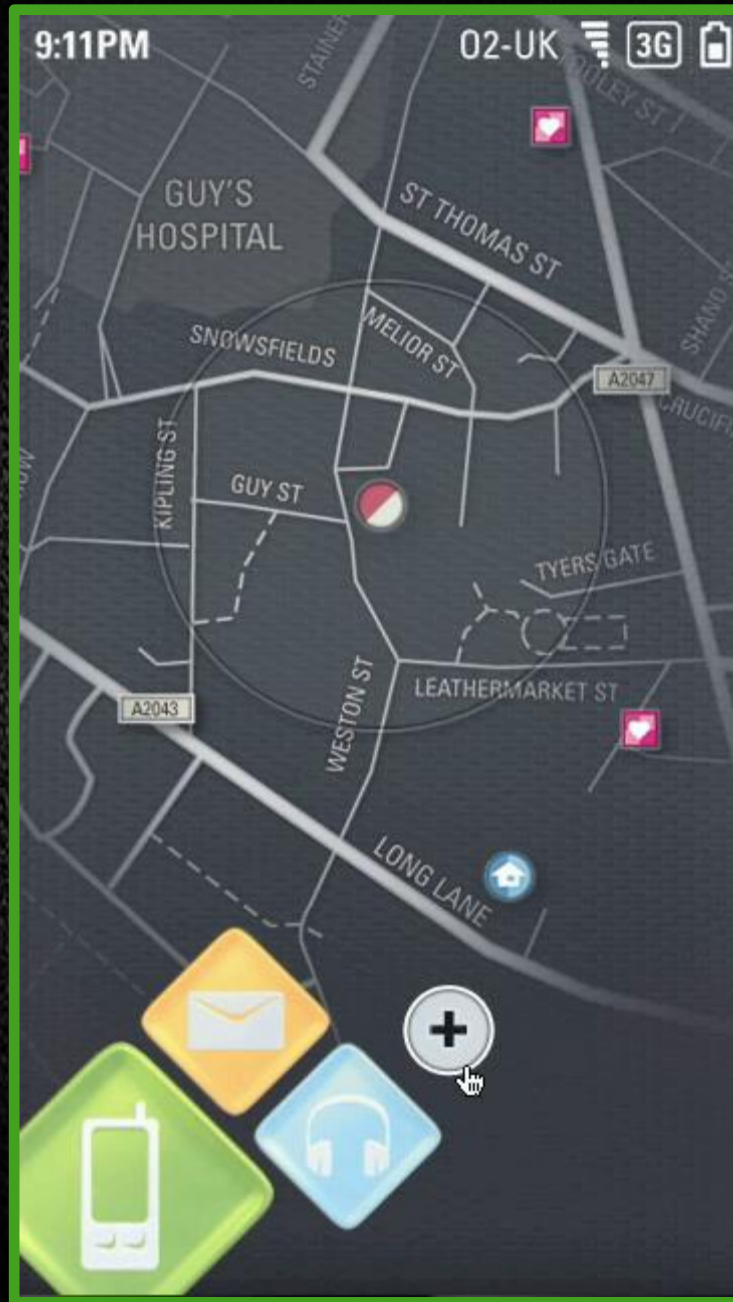

# Motion Deliverable

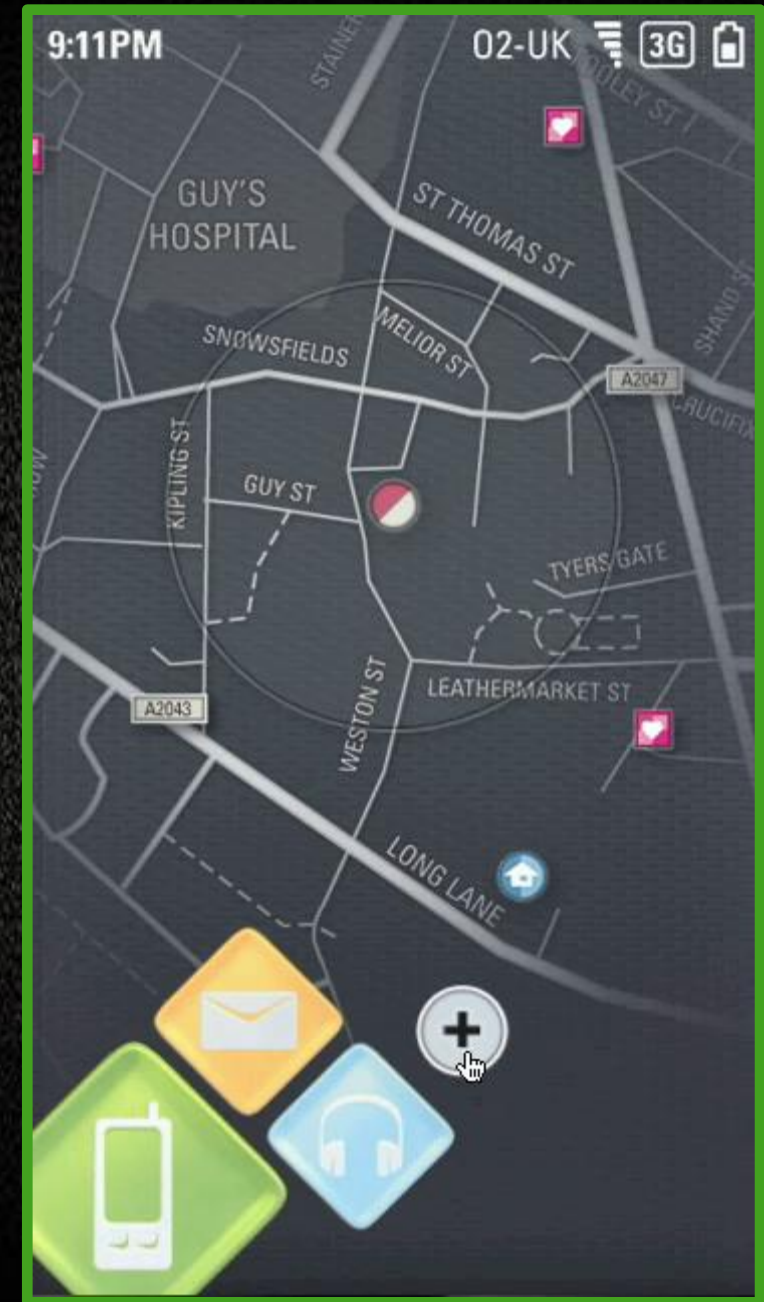

Traditionally done using Flash

See video: [addon/module-006/videos/m\\_1.mov](#)

See video: [addon/module-006/videos/m\\_2.mov](#)

See video: [addon/module-006/videos/m\\_3.mov](#)

# Topics

- 1 Design Workflow
- 2 QtQuick and Design
- 3 Questions
- 4 Lab

# How QtQuick and design get together

A tool for motion and interaction designers

Fast prototyping

Final user testing

Detailed layout specs is replaced by QtQuick

## A step forward

Let's face it. C++ developers don't use Flash

Your code can be reused by the devs

Future UI reviews and refinements are easier

It's pretty easy to test on a Maemo or Meego device

# Quick and easy start

Export your designs from Adobe Photoshop or from Gimp directly to QML.

To know more about this script:

<http://doc.qt.nokia.com/qtcreator-snapshot/quick-export-to-qml.html>

# Weather Case

The job was to make this app more beautiful and more functional. First we had to list all its features and problems

Current  
temperature

What about  
today's forecast?

Where is the  
city?

Too much  
information

# Sketching

Then we started to sketch and try to solve the problems that were enumerated before

QtQuick and Design

# Final drawings

# Final motion presentation

See video: [addon/module-006/videos/weather.mp4](#)

QtQuick and Design

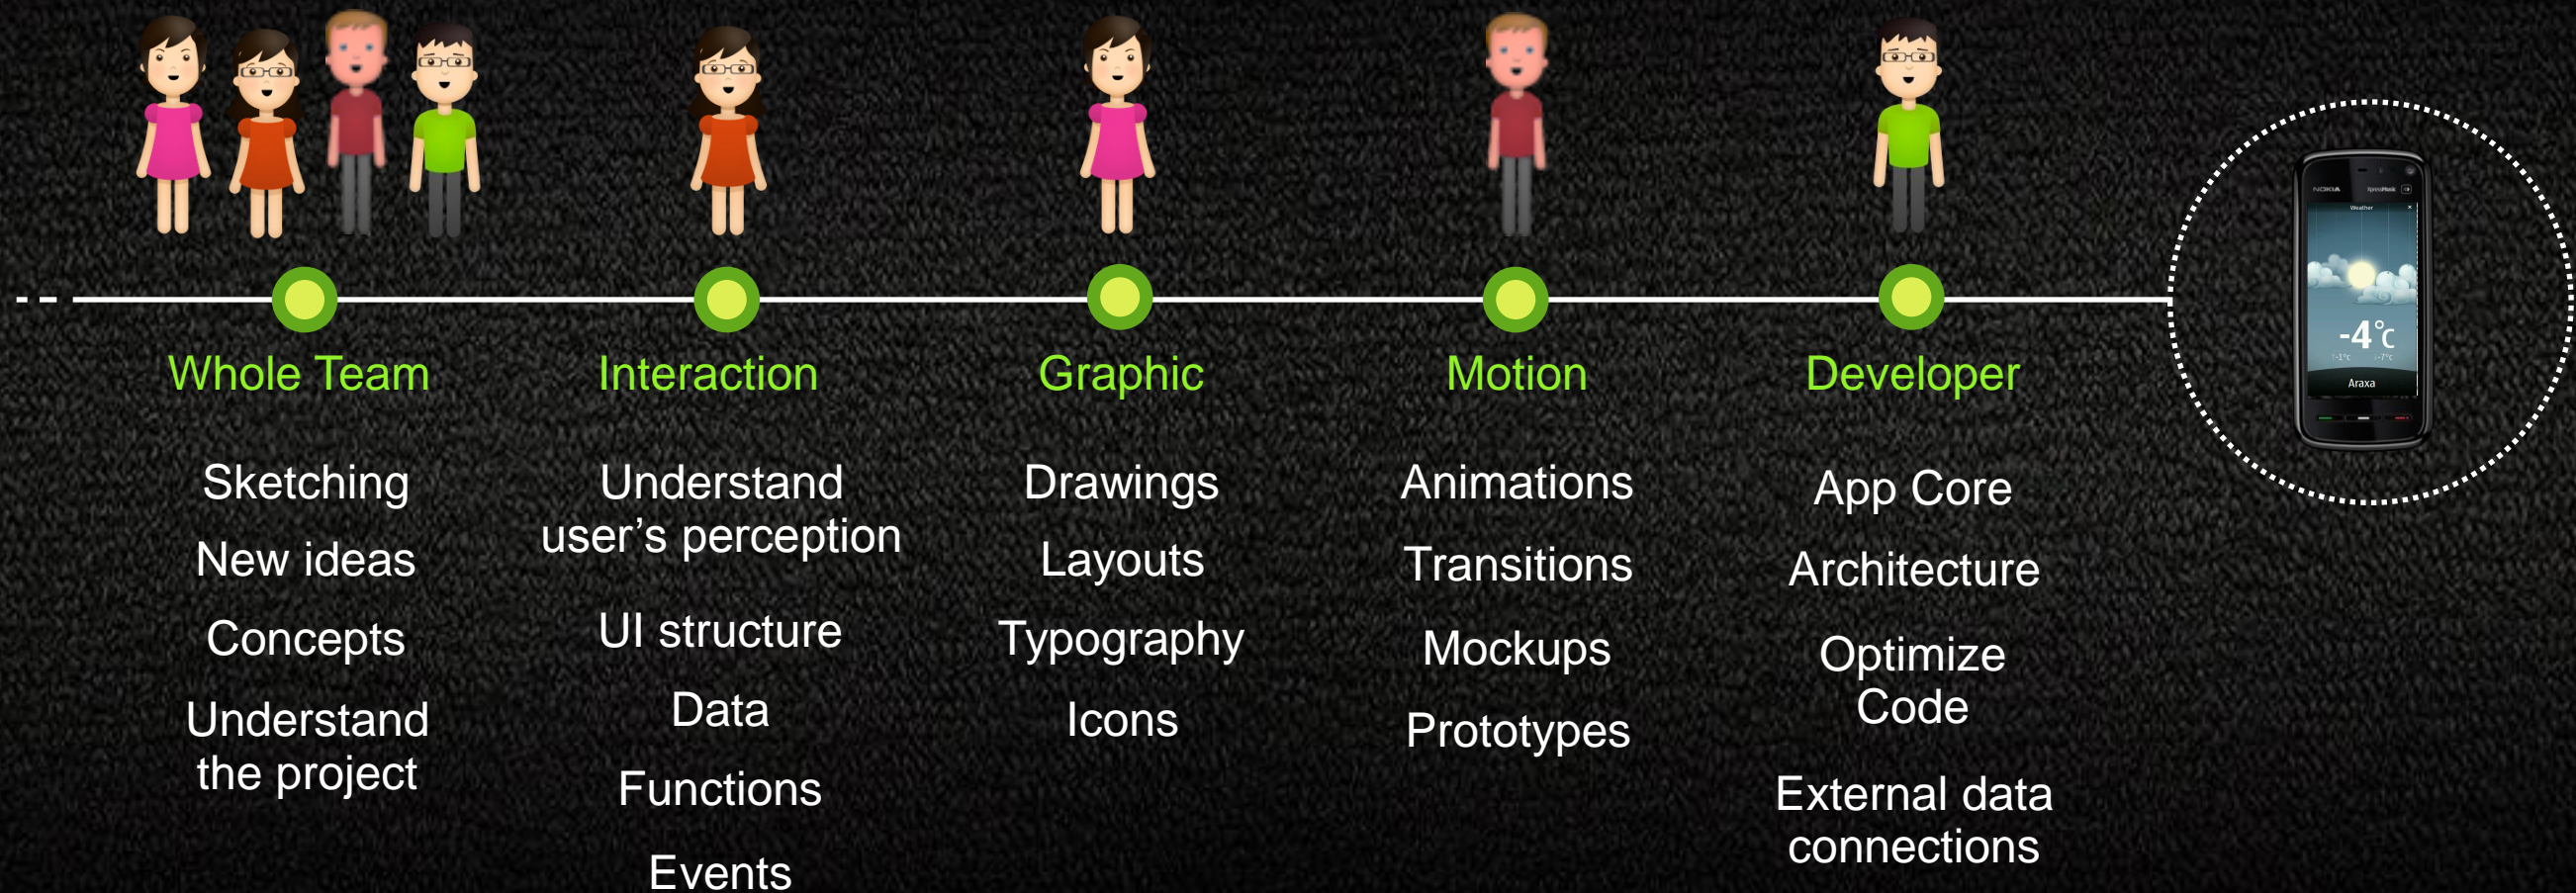

# It's developer time

See video: [addon/module-006/videos/dev\\_job.mp4](#)

# Project Timeline

# Topics

- 1 Design Workflow
- 2 QtQuick and Design
- 3 Questions
- 4 Lab

## Questions

How QtQuick can improve the design workflow?

What is the job of an Interaction Designer?

According to Nokia, what are the factors necessary for a product to achieve success?

How is a design workflow process?

How QtQuick helps to improve the integration between designers and developers?

# Topics

- 1 Design Workflow
- 2 QtQuick and Design
- 3 Questions
- 4 Lab

# How would you create this?

You must create the transition between these two screens

Optional: Create also the transition from the dialer to the menu

See lab: [addon/module-006/labs/lab-transition/labSix.qmlproject](#)
